### **About Simavita**

Simavita is a medical device company operating in the digital healthcare sector that has developed an innovative, world first solution for the management of urinary incontinence, with a focus on the elderly. The first product is the SIM™ platform technology which is an instrumented incontinence assessment application that provides evidence based incontinence management care plans to the residential aged care market.

### **About SIM™**

SIM™ is a wireless sensor technology that delivers evidence-based instrument incontinence data on individuals. SIM™ provides user friendly tools and software to assess the incontinence condition and to help plan better outcomes. SIM™ is used to detect, record and report incontinence events during a compulsory or recommended assessment period in residential aged care facilities to develop an evidence-based incontinence care plan.

Conducting assessments is mandatory in many countries and the incontinence assessment creates an influential element of care of each individual.
